Professional Projects

Current Projects

Working with two small startups to establish web presence that utilizes WordPress and Astra theme to create online storefront. Additionally involved with product photography and retouching, informational content, and setting up WooCommerce.

Propel Projects

Fulfilled the role of front end developer on a group project creating a MVP App that could recommend customized travel plans based on the user constraints and individual preferences. The App was created using Ionic/React framework, Python, and fast API. Challenges for this project included becoming more comfortable with JavaScript, React, calling an API from the backend, using the comand line., And working in tandem with teammates located on different contenents and timezones to create a project that was to be presented at the end of eight weeks.

Work Experience

Connections Pet Rescue

Worked with 501(c)(3) non-profit that provides shelter pets with homes, establishing and maintaining website. Communicated with leadership regarding content and design of website. Challenges for the project involved working within Rescue Groups established CMS framework that limited access to core files. Creating site navigation that was responsive that was formatted using tables.

Grendel's Coffee Shop

Worked with owner to create a mobile first design that captured the look and feel of the cafe. Website utilizes Foundation Framework and Flexbox. Currently transitioning cafe website to Wordpress CMS in order to include some of the functionality the platform provides.

Cascadia Piper (Internship)

Objective was to create a website redesign using Wordpress. Functionality that needed to be included was for the client to easily update calendar and blog, upload music and pictures, and had a contact form, Website additionally needed to keep in mind older users so the layout needed to be clean, and the fonts legible.
